

To Do

- Cheese
- Howdy
- Custom boot logo
- Make firefox initial window size constant
- Check out:
 - setzer: latex editor
 - LMMS: music studio
 - gcompris: games for 2-10 year olds

Migration

1. Partition the disk if necessary.

2. Mount the destination root filesystem at /mnt:

```
sudo mount /dev/disk/by-partlabel/root /mnt
```

3. Mount the boot filesystem at /mnt/boot

```
sudo mkdir /mnt/boot
sudo mount -o umask=077 /dev/disk/by-partlabel/boot /mnt/boot
```

4. Activate swap, if necessary:

```
sudo swapon /dev/disk/by-partlabel/swap
```

5. Mount other partitions, if necessary.

6. Get this flake:

```
nix --extra-experimental-features nix-command --extra-experimental-feat
git clone https://github.com/clayts/nixos
cd nixos
```

7. Scan hardware and push changes so they aren't lost:

```
nixos-generate-config --root /mnt --show-hardware-config > hardware/sys
git commit -am "migration"
git push
```

8. Install:

```
sudo nixos-install --flake .#os --root /mnt
```

9. Reboot
